

Omnitracs Scheduler

Optimizing Customer-Chosen Delivery + Service Windows Automatically, Behind the Scenes

Omnitracs Roadnet Scheduler enables greater operational efficiency, profitability and customer service through point of sale and self-scheduling of appointment times or reservations. By constantly analyzing the day's confirmed orders on an order-by-order basis, Omnitracs Roadnet Scheduler quickly tells you which delivery and service windows you can promise and deliver on.

Active Alert: Extend the order lifecycle by providing real-time notification with Roadnet's Active Alert.

MobileCast Tracking: Add visibility out on the road with Roadnet's MobileCast Tracking.

- **Delivery + Service Optimization** – Orders are continually reshuffled to optimize routes while preserving commitments – that is, your 25th delivery or appointment won't disrupt plans for the previous 24.
- **Delivery + Service Window Confirmations** – Delivery and service windows are reserved during the shopping process and automatically recycled if a customer does not order or exceeds the timeout.

This add-on to Omnitracs Roadnet's route planning software has the intelligence to present available windows to each customer throughout the order period and up until the time window is filled to capacity. It even provides data based upon costs to allow for the configuration of discounts or other incentives to encourage customers to choose windows that optimize the route.

With Scheduler, you have access to:

- a single and multiple order modeling tool module
- a real-time schedule monitor module
- a flexible API for integration with third-party applications, such as Point of Sale systems

Through configuration of the API, Scheduler will allow for continuous optimization of routes and schedules at point of sale, maximizing profit potential as well as:

- **100% Address Accuracy**— Address information is automatically assigned a geocode (latitude and longitude coordinate) after your customer enters it. The closest match is presented to your customer for conformation. This takes the guesswork – and bad addresses – out of your database.
- **Cost Differentiation of Each Delivery or Service Windows**— Delivering to or servicing a customer between 4pm and 6pm may cost you \$5 more than it would between 1pm and 3pm. Scheduler presents the options to let you decide the most cost-effective option for you.

Roadnet Scheduler is ideal for:

- the home delivery market (such as food, white goods and furniture)
- retailers looking to present an omni-channel solution
- residential service providers requiring appointment times

A critical part of the entire order lifecycle, Roadnet Scheduler offers visibility all the way through the final logistics of the delivery or appointment.

Together with Omnitracs Roadnet MobileCast and Active Alert, Scheduler is a complete solution for superior customer service, operational efficiency and increased revenue opportunities.

Getting More from Your Technology Investment

The Omnitracs Alliance Program facilitates integration of Omnitracs solutions with other leading companies that provide complementary technologies and services. This program taps into the power of integration in order to best meet the needs of our shared customers.

We offer Omnitracs Professional Services to all sizes of fleets to help you utilize our applications and our partners' applications in the most efficient way. Our assessment, integration, custom development and programming, training, business intelligence, and predictive modeling services deliver practical solutions. This critical information increases your productivity and efficiency, so you can both grow and differentiate your business.

The Omnitracs Services Portal provides access to a suite of web-based fleet management applications, including satellite mapping. Data from the Services Portal can be integrated into your existing enterprise systems.

About Omnitracs, LLC
