## 5 Steps to an Autonomous Future

Thank you for listening to Mario Herger's recent podcasts about our autonomous future. He mentioned five actions you can take today to ensure you're ready when autonomous vehicles become a part of your fleet.

1. Test drive an electric vehicle or two. If it's a Tesla, try out the autopilot. Whether it's a car or truck, it's important you understand how it feels and the differences between it and the vehicle you (or your drivers) drive today.
2. Attend conferences about new automotive technologies. Mario recommends the CES in Las Vegas and Los Angeles Autoshow where you can talk with manufacturers and get information so you can make an informed decision.
3. Read and subscribe to blogs on autonomous and electric technologies, such as:
  - a. [The Last Driver License Holder](#)
  - b. [Electrek](#)
  - c. [Inside EVs](#)
4. Read the book: [The Last Driver's License Holder Has Already Been Born](#). This is an excellent introduction to what the future will look like and how it will impact you, your fleet, and your community.
5. Subscribe to the Omnitracs Over the Road podcast. Take advantage of this opportunity to hear from a myriad of professionals – both from inside and outside the transportation industry – as you consider ideas and innovations that could transform your fleet financially, operationally, and safely.
