# HOURSGO

The HoursGO mobile application from Omnitracs acts as a companion app to Omnitracs Hours of Service, enabling drivers to remotely clock-in and -out or check their Hours of Service logs from any Android or iOS device while away from their trucks. Drivers can use this free app to accurately track on-duty status time from any location, enhance accountability for Hours of Service compliance, and improve backup potential for their entire operation.

HOW IT WORKS

HoursGO integrates with the Omnitracs ecosystem and connects to your dedicated Omnitracs ELD solution — empowering drivers to:

- View Available Hours when away from the vehicle
- Accurately log on-duty hours worked while outside of the vehicle
- Access a PDF copy of logs to be used during a roadside inspection if their dedicated ELD is unable to display logs

Drivers have enough to do in a day — from routing, to dealing with traffic, to delivering orders. We're excited to offer HoursGO as a way to help simplify the crucial operational aspects of logging hours and remaining compliant.
