

Professional Services Consulting

Customized consulting that fits your specific needs.

Keeping integration with legacy systems and third party data up to date can seem like a long and never ending process with the mass amounts of data electronic logging devices produce. On the other hand, integrating the systems can be equally as exhausting, and even if you have a good grasp of how to do it, many times you need help beyond what a developer wiki or documentation can provide. That's why your fleet needs a resource who truly understands the system with which you are integrating.

Get Integration help from the engineers who know your systems best.

Professional Services Consulting provides your fleet with:

- Quick and efficient integration
- Increased system and operational efficiency
- Cost effective planning and design
- Latest and most up to date processes of implementation

Professional Services Consulting guides fleets on how to leverage technology in an integration environment on everything from web services consulting, development, testing, and deployment assistance. This makes it perfect for fleets who need a level of technical expertise to help with integration approaches, third party interfaces and leveraging websites for general data extraction along with insight on what data is available. By leveraging knowledge of system capabilities and how other fleets have performed similar requests, Professional Services Consulting helps customers avoid mistakes previous customers have already made. This allows customer and technical staff to complete third party and backend system integration as well as web based data extraction needs quicker, more effectively and efficiently.

Professional Services Consulting provides your fleet with a software/systems engineer who understands how to navigate and leverage Omnitracs system capabilities with hundreds of hours of integration experience. The engineer will work with your fleet to design or review existing integration designs and make recommendations on how to create or update that design. With our consulting service, you will receive a detailed account of the integration plan and the ability to work with any of our product offerings for customized consulting to meet all of your business needs. Professional Services Consulting can help consult on your migration of older systems to newer ones and help you determine if you should buy it or build it when it comes to taking your fleet to the next level. In the end, having a resource who truly understands the systems you're integrating with allows for quicker ROI and a smoother user experience.

Getting More from Your Technology Investment

The Omnitracs Alliance Program facilitates integration of Omnitracs solutions with other leading companies that provide complementary technologies and services. This program taps into the power of integration in order to best meet the needs of our shared customers.

We offer Omnitracs Professional Services to all sizes of fleets to help you utilize our applications and our partners' applications in the most efficient way. Our assessment, integration, custom development and programming, training, business intelligence, and predictive modeling services deliver practical solutions. This critical information increases your productivity and efficiency, so you can both grow and differentiate your business.

The Omnitracs Services Portal provides access to a suite of web-based fleet management applications, including satellite mapping. Data from the Services Portal can be integrated into your existing enterprise systems.

Why Omnitracs
